

# Eight masts: the guaranteed search region closes in on the source

the held-out 8-mast scenario with the largest baseline-to-physics contrast across all three models (283 kg h<sup>-1</sup>, same scenario in every panel); every region shown covers the source

— baseline 90% region    — physics-guided 90% region    - - - 50 m facility scale    + true methane source    • sensor masts (8)
